

HR ANALYTICS DASHBOARD

Power BI Dashboard Report

Data Visualization & Reporting

Workforce | Compensation | Performance | Attrition

Prepared by Adrij Das

1. Dashboard Overview

The HR Analytics Dashboard is an interactive Power BI dashboard designed to provide a clear, single-page view of key workforce information. It brings together employee headcount, active employees, attrition, salary, performance, department, job level, country, hiring year and work mode information in one reporting interface.

The dashboard is designed for HR professionals and decision-makers who need to quickly understand the current workforce structure and explore different employee segments through interactive filters.

2. Dashboard Objectives

- Provide a quick overview of the organization's workforce.
- Monitor employee activity and attrition.
- Compare compensation across departments and job levels.
- Understand the distribution of employees across performance categories.
- Review workforce distribution by department, country and work mode.
- Observe hiring patterns across years.
- Allow users to interactively filter the dashboard according to their area of interest.

3. Dashboard Layout

The dashboard uses a single-page layout. This keeps the major HR indicators and supporting charts visible together and reduces the need to move between multiple report pages.

Dashboard area	Purpose
Header	Identifies the dashboard and its four main themes.
Filter panel	Provides Department, Job Level, Work Mode and Country filters.
KPI cards	Shows headline workforce, compensation and performance indicators.
Workforce visuals	Shows employees by department, status, hiring year and work mode.
Compensation visuals	Compares salary by department and job level.
Performance visuals	Shows employee performance distribution and average performance by department.

4. Key Performance Indicators

The dashboard contains KPI cards at the top of the page. These cards allow users to understand the main workforce and compensation figures before examining the detailed charts.

KPI	Displayed value	Purpose
Total Employees	20K	Shows the overall employee population.
Active Employees	17K	Shows the number of employees recorded as active.
Attrition Rate	0.13	Shows the dashboard's attrition measure. For HR readability, this should ideally be displayed as a percentage.
Average Salary	83.39K	Shows the average salary level.
Median Salary	80.98K	Shows the central salary value.

Average Performance	2.64	Shows the average performance measure.
Maximum Salary	280K	Shows the highest salary represented.
Minimum Salary	35K	Shows the lowest salary represented.

5. Interactive Filters

The left-side filter panel allows users to interact with the dashboard. Selecting a value in a slicer filters the connected visuals so that users can focus on a specific employee segment.

- Department – filters the dashboard by department.
- Job Level – filters employees by job level.
- Work Mode – filters employees by On-site, Hybrid or Remote work mode.
- Country – filters the dashboard by country.

6. Dashboard Visualizations

Employees by Department

A column chart showing the number of employees in each department. It provides a quick comparison of workforce size across HR, Operations, IT, Sales and Finance.

Average Salary by Department

A horizontal bar chart comparing average salary across departments. It helps users identify differences in average compensation between business functions.

Average Salary by Job Level

A column chart comparing average salary across Director, Mid, Senior and Junior job levels. It provides a direct view of how compensation varies across organizational levels.

Employee Status Distribution

A donut chart showing the proportion of employees classified as Active, Resigned or Terminated. It provides a compact view of workforce status.

Employee Performance Distribution

A bar chart showing the number of employees in performance categories such as Good, Satisfactory, Excellent and Needs Improvement.

Salary Band Distribution

A donut chart showing the distribution of employees across Low, Medium and High salary bands.

Hiring Trend by Year

A line chart showing the number of employees by hire year. It allows users to observe changes in hiring volume over time.

Employees by Work Mode

A horizontal bar chart comparing the number of employees working On-site, Hybrid and Remote.

Average Performance by Department

A column chart comparing average performance across departments. It allows users to see whether average performance varies visibly between business functions.

7. Dashboard Insights

The dashboard provides several direct observations that can be used for HR monitoring and discussion.

- The workforce contains approximately 20K employees, with approximately 17K shown as active.
- The status distribution is dominated by Active employees, while Resigned and Terminated employees represent smaller portions of the displayed workforce.
- Average salary is approximately 83.39K, while median salary is approximately 80.98K.
- The salary visuals allow comparison of compensation across both departments and job levels.
- The performance distribution shows that Good and Satisfactory categories contain the largest employee groups in the displayed dashboard.
- Average performance by department appears relatively close across the departments shown.
- The hiring trend provides a year-by-year view of employee additions and makes changes in hiring volume easier to identify.
- The work-mode chart shows the relative size of On-site, Hybrid and Remote employee groups.
- The Country slicer provides a way to focus the dashboard on individual countries, while the Department, Job Level and Work Mode slicers provide additional segmentation.

8. HR Decision-Making Use Cases

- Workforce planning: use employee counts by department, country and work mode to understand workforce distribution.
- Compensation review: compare average salary by department and job level to identify areas for further investigation.
- Workforce stability monitoring: use employee status and the attrition KPI to monitor employee exits.
- Performance monitoring: review the performance distribution and compare average performance across departments.
- Hiring planning: use the hiring trend to review changes in recruitment volume over time.
- Segment analysis: use the slicers to investigate specific employee populations rather than relying only on overall totals.

9. Visual Design & Usability

The dashboard uses a compact single-page structure with a dedicated filter panel, KPI cards and multiple supporting visuals. The layout groups related information together so that users can move from headline metrics to workforce, compensation and performance details.

- KPI cards are placed at the top for quick access to headline measures.
- Interactive slicers are grouped on the left for easy filtering.
- Charts use clear titles to communicate what each visual represents.
- Different chart types are used according to the purpose of the analysis: columns for comparisons, bars for category ranking, donuts for composition and a line chart for time trends.
- The dashboard is intended to remain readable without requiring technical knowledge of the underlying data fields.

10. Conclusion

The Power BI HR Analytics Dashboard provides a consolidated view of workforce, compensation, performance, hiring and employee-status information. Its single-page design and interactive slicers allow HR users to move from an organization-wide overview to focused employee segments. The combination of KPI cards and supporting charts makes the dashboard suitable for routine HR reporting, workforce monitoring and initial decision-making discussions.

11. Technology Used

- Microsoft Power BI
- Power BI Data Model and DAX measures
- Interactive slicers and report visuals
